

## Curv DeFi

# The first ever institutional-grade enterprise DeFi solution

### Stop using retail DeFi products for your institutional needs

As decentralized finance (DeFi) nears \$15 billion in market capitalization, institutions remain marginalized and limited in their ability to interact with smart contract protocols -- thus, unable to truly access the innovation afforded by DeFi. Institutions are instead forced to impractically piece together retail-oriented products and use tedious workarounds to secure involvement. Existing market infrastructure simply does not offer institutions the enterprise controls and broader protocol access required to accelerate their inroads into the DeFi space.

**Curv DeFi** changes this by securing decentralized finance for institutions, allowing them to borrow, lend, stake and trade any and all DeFi protocols through a single protected infrastructure. The options afforded by DeFi are endless and with the proper infrastructure institutions can not only connect with this dynamic landscape but also ensure continuous access and proper security for their organization as it builds and scales its DeFi strategy.

**Our release of Curv DeFi forms the institutional cornerstone for the DeFi ecosystem, priming the space for its next phase of exponential growth.** Curv's offering will comprehensively address security risks, policy/control requirements, and account for existing and new DeFi protocols to always deliver maximum revenue to institutional clients.

### Curv DeFi Governance Control

From Curv's perspective, institutions should be afforded the same enterprise level of security and governance controls over DeFi as they do with their existing digital asset operations and storage. Curv DeFi is secured via Curv's MPC protocols on a keyless platform, ensuring no single point of failure and offering the ability to enforce a policy mechanism that controls exactly who, how and to what extent any individual at an institution can execute a smart contract.

## Curv DeFi Benefits

**Reassess the speed** at which your institution approaches DeFi without having to piece together different solutions or build out a customized integration

**Adopt any DeFi application**, ensuring secure and constant support for all DeFi protocols

Benefit from **the same enterprise-level controls and protection** you require and are accustomed to for your digital asset operations for DeFi

**Stop using retail products** for your institutional needs. Leverage Curv's onramps to conduct secure transfers in support of your decentralized finance strategy
